

Face the
distributed
network

BYOD,
home offices
and human factor
could increase the
importance of a firewall

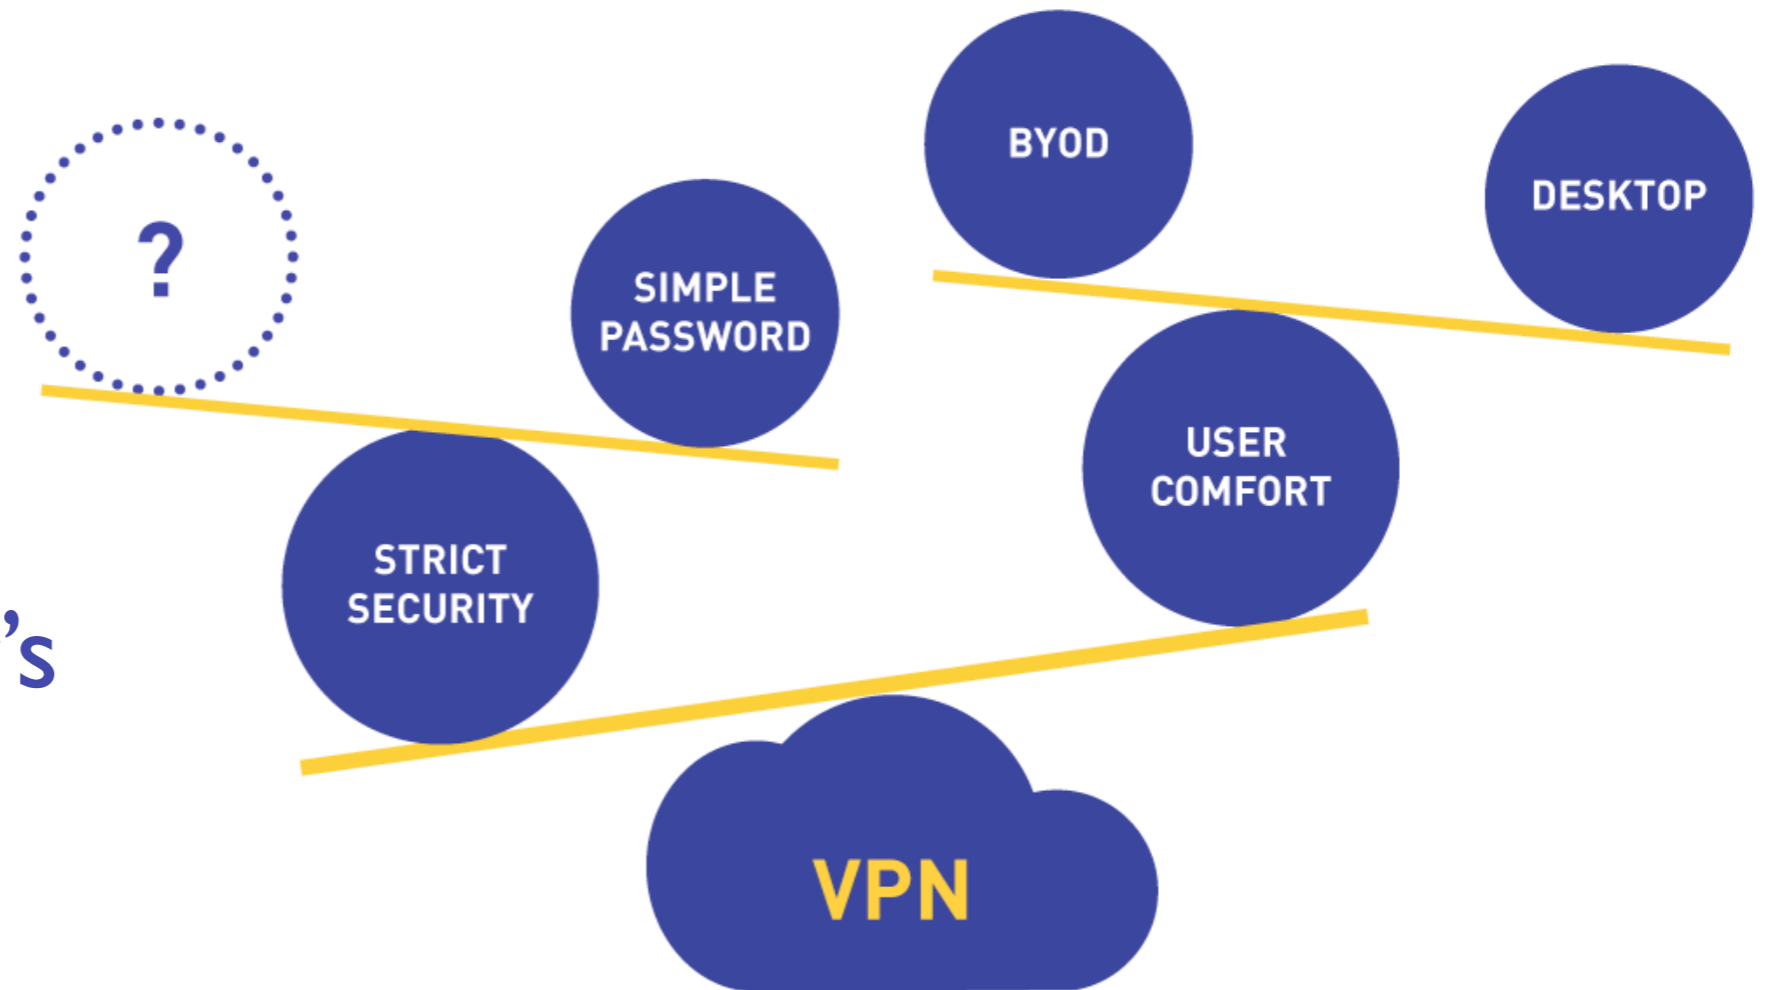

Increased devices, increased threats

The distributed network and the growing number of unknown devices increase the risk of security breaches and data leaks

Security is a compromise

Standard firewall policies: a compromise between strict security and user's productivities/comfort

Security with
NO
compromises

Standard firewall policies
can be enhanced with

strong authentication
while maintaining users' comfort

Easy passwords in brief

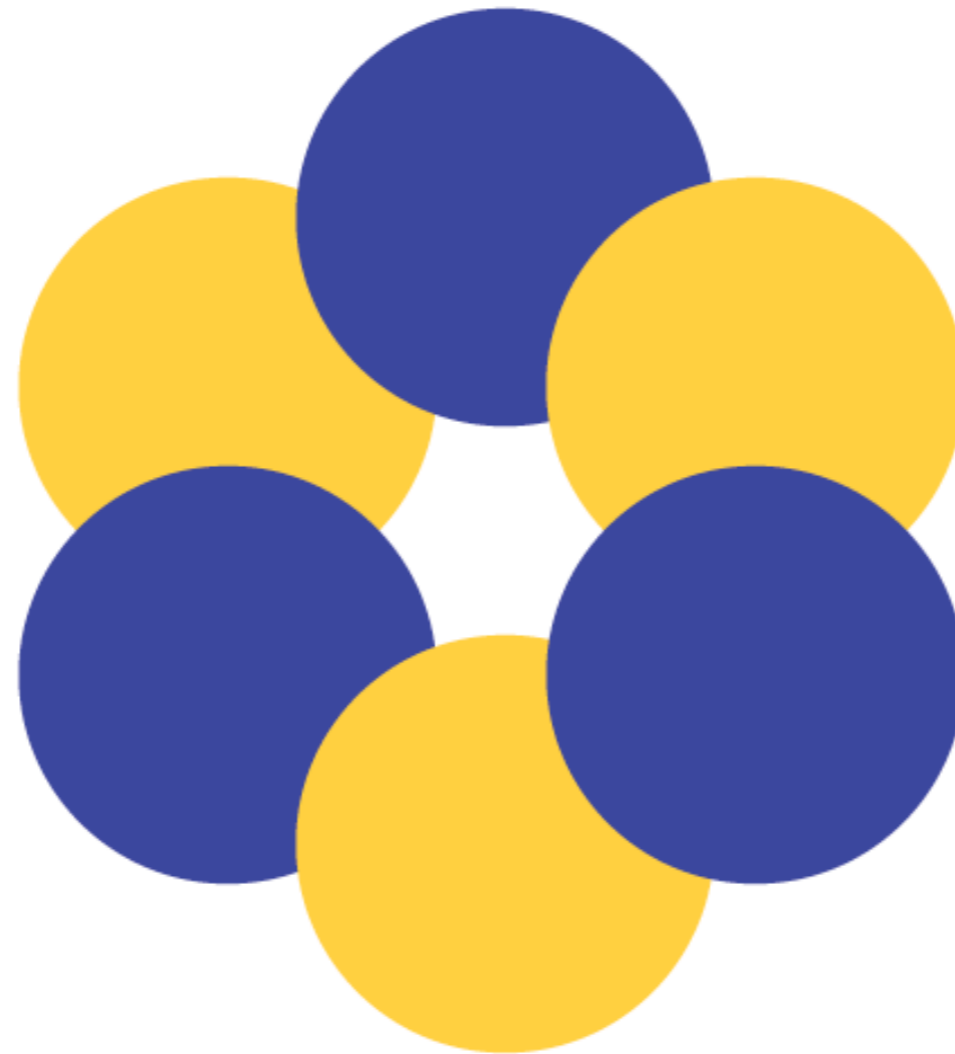

Authentication: where all security needs meet

Recognize
your users

Unguessable
passwords

Avoid writing
passwords in
a post-it

Allow only
company's
devices

Multifactor
authentication

Protect from
automatic
attacks

Add another strategic filter to your firewall

SecurePass is the sparring partner to enforce your protection

Don't risk your reputation while allowing malicious users

There's an easy dashboard for network administrators

Firewall marries SecurePass

Easy integration through standard protocols

Swiss traditions of  security and high quality

SECURE PASS™

Strong authentication & identity management made easy for Internet Services
